

■ RGJ 绕管机 RGJ Pipe Winding Center

本绕管机中心主要由绕管机、滚轮支承、绕管车三部分组成。绕管机中心用于换热器的管子缠绕。它通过绕管机的旋转带动工件回转，实现缠绕。

绕管车、绕管机控制部分可以单独控制，也可以联动控制。这样便于绕管的时候速度匹配。在生产过程中可大大提高效率，减少工人的劳动强度，是快速提高劳动效率的方法之一。

The pipe winding machine center is composed of winding machine, roller bearing, and trolley. It is mainly used for pipe winding of heat exchanger. Pipe winding machine drives the workpiece to rotate, and then realize winding. Trolley and pipe winding machine could be controlled both together and separately to choose matching speed. Pipe winding center will improve the efficiency, and reduce labor intensity greatly.
